

Maxim Fursov

Builder. Helsinki, Finland. maxfurs2008@gmail.com · github.com/Makimum · x.com/makimum_dev

I ship products end to end: backend, model plumbing, frontend, and the launch. Born in Russia, based in Finland, currently in the IB Programme.

VettaX — co-founder

vetta-x.com · 2026

AI growth agent for X and LinkedIn. It watches the accounts you pick, drafts replies and posts in your voice, and publishes only after you approve. Built with a co-founder in a month, after a full pivot.

Active users, 30 days	601
Views on the launch post	187,700
Peerlist upvotes	124
First revenue	\$202

- Peerlist Launchpad — **#16 of the week**, Best B2C SaaS
- **3rd place, AFM AI Hackathon** — the largest AI-security hackathon in Kazakhstan
- Pitched at **nFactorial Incubator '26** demo day, Almaty
- Around 200 clients, 2 signed companies

Stack: Python, FastAPI, Postgres + pgvector, Redis / ARQ, React 19, TanStack.

The hard part was never the model. X answers a reply with 403 when the token is wrong and 403 when the surface is wrong, and the two look identical. Proving the gate was per-surface rather than per-account took correlating twelve publish attempts against their targets.

RiseFaceit

Telegram mini-app system

Joined a friend's project and built the mini-app system behind it. My first product with real users and real money: **10,000 users**.

RookieAI

First project. Non-commercial, and that was the point.

An AI copilot for picking a university, aimed at IB and A-Level students. No revenue, no plan — the one I built to find out whether I could.

makimum.dev

This site, and the room it is made of

A procedural 3D room in the browser. No purchased assets, no GLB files, zero bytes of geometry in the bundle. Global illumination is path-traced in the browser and baked into vertex colours. The sky outside the window is the real Helsinki sky, computed from the sun's actual position — at midwinter noon the sun sits at 6 degrees and the room spends the whole day in golden hour, because that is what actually happens at 60 degrees north.

77,140 triangles, 330 KB gzipped.

Before the products

100+ crypto projects as an ambassador and drop hunter, inside one of the largest Russian-speaking Web3 communities. It paid. It also taught me that the money was never the part I liked — the part I liked was building the bots and the scripts.

Education

- **IB Programme** — in progress
- **University of Oulu via FITech** — Programming Basics, Programming Advanced

Mathematics

- **CEESA Math Competition** — three years running
- **Countdown round** — twice
- **3rd place**, team standings

Languages and tools

Python, Java, TypeScript, React, FastAPI, Postgres, Redis, three.js.
